CAUSALIX

DAN'X brings change to the Transport Industry - Introducing Causalix Track-It solution

Data Capture at low cost:

DAN'X Chose the Intermec SF51 for the scanning, and a Hewlett Packard IPAQ as the PDA. The combination of the tough weather and impact resistant scanner with the more delicate HP IPAQ, ensured Low Cost and High Technology at the same time. The Bluetooth connection between the 2 parts makes scanning quick and easy, yet very reliable. The design of the solution, ensures that the IPAQ remains in the belt during operation.

Jens Christian Andersen, IT Manager at DAN'X: *"The main benefit is the automatic updates – getting the information so quickly is great for us and for our customers." The fact that updates now happen automatically is also critical for DAN'X, as the company is saving money on data processing. "Staff time dedicated to data entry and checking can now be reallocated," says Andersen. "This means employees can concentrate on more productive tasks, and focus on providing better service for our customers." Since the Causalix solution was adopted, DAN'X has also raised its delivery accuracy rate from 99,5 to 99, 8%.*

High Performance & POD:

DAN'X prides itself on offering delivery by 7am or 10am the next day, which means a lot of overnight driving if goals are to be met. With the Causalix solution, DAN'X's fleet of 50 vans are well placed to maintain and even build upon the company's high performance levels. DAN'X drivers scan all parcels on uplift, so at any given point in time, they know exactly what their van contains.

Data Capture → Proof Of Delivery → Business Intelligence
